Sets a standard in traceability

FUNCTIONS OF THE SOFTWARE

- Owner registration
- Location registration
- Data can be stored on a computer as well as a central database via internet
- Animal records can be transferred from one owner to another via internet
- Proof of ownership when combined with DNA
- A transport form can be printed that contains the details of the seller, buyer and the numbers of the animals that are sold
- Wool fibre thickness can be kept on record and will facilitate grouping of animals for shearing and selection purposes
- Treatment records can be kept
- FAMACHA® – worm resilient sheep can be identified
- ADG (average daily gain) can be calculated
- Serving dates can be kept on record and used to calculate expected parturition dates
- The software makes provision for a range of animal species including sheep, goat, pigs, ostriches and cattle
- Several reports can be generated to assist in decision making to ensure proper herd management
- Assist in biosecurity
- Assist in the control of erosion and notifiable diseases.

“...strengthens consumer confidence.”
