

# Biosecurity: Your Essential Shield Against Foot and Mouth Disease (FMD)

## The Gold Standard Disinfection Protocol

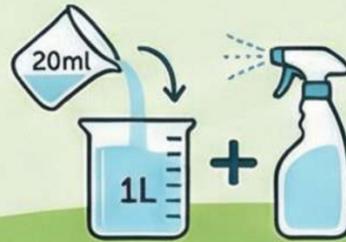

### The Two-Stage Cleaning Process

Clean first with detergent to lower microbial load, then apply F10CL disinfectant.

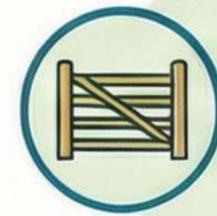

### Recommended 1:50 Dilution Ratio

Mix 20ml of F10CL per 1 litre of clean water for effective disinfection.

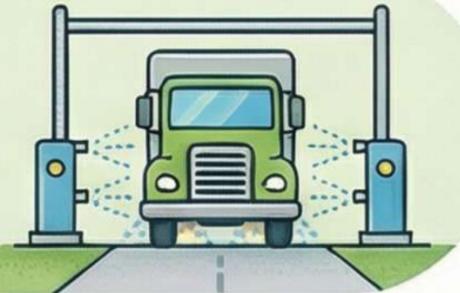

Biosecurity is a permanent requirement. These guidelines outline a rigorous two-stage disinfection process and strict access controls to prevent the entry and spread of Foot and Mouth Disease Virus (FMDV).

## Critical On-Farm Control Measures

### Strict Access and Vehicle Control

Limit to one entrance and spray vehicle wheels/chassis before entry and exit.

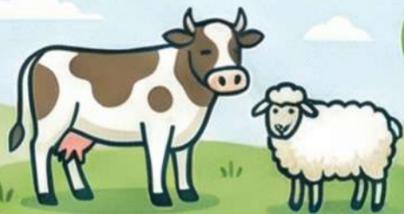

### Effective Foot Bath Management

Scrub footwear clean before stepping into at least 15cm of disinfectant solution.

### Safe and Non-Corrosive Formula

F10CL is biodegradable and safe to use in the presence of animals.

## Focus Area Maintenance

### Feed & Water Troughs

Clean weekly, removing all organic matter before disinfecting.

### Animal Housing

Scrub with detergent/cleanser and spray F10CL to dry naturally.

### Vehicles & PPE

Thoroughly disinfect before and after transporting animals or site visits.

### Personnel Hygiene & PPE

Use dedicated, regularly disinfected overalls and gumboots for different animal zones.
